

BUFO ALVARIUS

BUFO ALVARIUS: AN EXPERIENCE AT THE PEAK OF UNITY AND EXPANSION OF CONSCIOUSNESS

BUFO ALVARIUS is a natural medicine extracted from the glands of the toad Bufo Alvarius native to the Sonoran Desert (Mexico). It is considered the most potent entheogen currently known. It is important to know that when extracting the substance from the glands of the toad, the latter does not suffer and it is released into its natural environment right after. These toads come out 3 months a year and it is the only species in the world to possess this substance.

Its taking is in the form of inhaling the smoke from a glass pipette during the combustion of crystals from extraction

It is a therapeutic-spiritual healing experience of great purity that allows us to regain the memory of who we are. The boundaries of identity disappear, like a salt doll that dissolves in the ocean of consciousness producing a massive release of accumulated stress and repressed emotions.

The experience lasts between 15 and 20 minutes but the person who lives it loses the notion of time and experiences a dizzying feeling of eternity, infinity and unity with all existence. During the experience it is also possible to go through moments of great anguish which are the preamble to the encounter with the divine. Those moments preceding a total oceanic feeling of communion with oneself and life resemble the sensation of being thrown into the void at high speed with a total dissolution of the ego.

Great courage is necessary to live such an experience, those who cross the limit of the death of the ego lose the veil of illusion, separation and are totally submerged in the extraordinary experience of unity.

It is necessary to note that these are not vague or subtle sensations, so it is certainly the most powerful and profound experience that a human being can experience.

It is an encounter with the absolute, the mystical experience par excellence where the observer merges with the observed and the consciousness is aware of itself. With the toad we experience the dimension of the human from the divine.

The climax of the experience comes 3 minutes after taking the substance and then occurs a state of immense peace and serenity until gradually our ego returns and we recover our usual sensations.

This experience does not change anyone's life, but it does bring a new vision of existence that can help make the decision to make significant changes in one's life.

After the experience it is possible to feel what Stanislav Grof calls a psychedelic "flashback" by referring to the possibility of reliving the experience by sleeping the next night, it is an experience of momentary ecstasy where one

BUFO ALVARIUS

is possessed by a sense of unity with all things that can be disconcerting at first and cause panic in some people. This happens in a tiny fraction of people who smoke this medicine.

At the scientific level we can find in medicine* 5-MEO-DMT, bufotenina and other bioamines that together produce a natural and clean experience, far from synthetic and chemical experiments like those produced by the laboratory 5-MEO-DMT.

There is no possibility of overdose because the number of tritamine receptors of the cells is limited and once saturated the body does not accept more "medicine". On the other hand, smoking the substance produced by the toad cancels out any toxicity.
