

SANANGA

Sananga is made from the roots and bark of the shrub *Tabernaemontana undulata*. The root and bark of this plant come from the Kaxinawá and Yawanawá tribe. This powerful and sacred medicine is used to cure physical and spiritual ailments by clearing the mind and energies and obtaining a completely new mode of perception and concentration.

This powerful cleansing of the eyes facilitates many levels of healing: physical, mental, emotional, psychological, and spiritual/energetic.

The active ingredient acts directly on the root causes of the disease, diluting the energies that create Panema (negative energy), conditions of depression and psychosomatics. On the physical level, it cleanses and refreshes the eyes and has been used in the treatment of: glaucoma, cataracts, astigmatism, conjunctivitis, dry and red eyes, photophobia, eye infections, sinusitis and chronic headaches. It can also be a great ally in the treatment of chronic pain.

In terms of immediate visual improvement, it gives the environment greater texture and depth, improved color perception and image definition.

On another level, it can facilitate opening the third eye, cleansing and expanding your aura, and balancing the chakras; keeping a balance, emotionally, mentally, psychologically and spiritually.

Sananga is made from the roots and bark of the shrub *Tabernaemontana undulata*, a species of the Apocynaceae family, and comes directly from the Amazonian tribes. This sacred and powerful medicine is used to heal physical and spiritual ailments, freeing the mind from distractive energies and offering a complete new way of perceiving and concentrating. Sananga is imbued with intentions of absolute clarity and focus.

MEDICINAL USE AND EFFECTS

The pure spirit of Sananga promotes a deep cleansing of blocked energies at the emotional, physical and spiritual levels. Sananga can balance and increase your energies, and find the roots of your illnesses and blockages, leading to complete balance, concentration and peace of mind. In addition, the drops will expand your spiritual vision and awareness, and improve your ability to read the intentions of others.

In addition, Sananga increases your long-term vision, which is important for visualizations and forecasts of the future. In addition to this, drops are also used to treat and improve a wide range of eye problems, such as myopia, depth and color perception, image definition, and detection accuracy. In addition, this magic drug is indicated in cases of serious eye diseases such as glaucoma, cataracts and blindness.

Although Sananga is renowned for its effects on vision and visualization, this drug is considered a versatile remedy for natives. It is applied for febrifuge, emetic, diuretic, calming and several other diseases. In addition, Sananga is often used to cure skin diseases (dermatitis), suppress appetite, relieve dental problems and fight snake bites and poisonings, heal eye wounds and rheumatism. Another important healing aspect of the Apocynaceae family is its widely explored antimicrobial activity, which has shown that this family possesses a powerful antioxidant.

Traditionally, tribes like the Matsés use Sananga as a hunting tool to achieve acute perception and concentration and to allow the detection of subtle movements in the dark jungle. In addition, the drops can allow a powerful visualization of the prey or plant, which allows for a quick and successful quest. Sananga is often paired with other hunting tools, such as Kambo, which further improve hunting skills. For most indigenous tribes, hunting means survival and therefore means an exceptionally important and crucial ability.

Tribes believe that becoming a good hunter and viewfinder can only be achieved by using sacred plants. These sacred plants improve perception and sharpness, intention, smell, endurance and luck. Therefore, hunting tools like Sananga and Kambo make up about a quarter of all medicinal plants used in indigenous tribes.

ORIGIN, CREATION AND APPLICATION

Sananga eye drops are made from the *Tabernaemontana undulata* shrub that grows in Acre, Brazil and other South American countries. The Kaxinawás tribe calls it "Mana Heins" and "Becchete" for the Mats. Mana Heins or Becchete belong to the family Apocynaceae, to which the iboga (*Tabernanthe iboga*) belongs. The bark of the root of this shrub is first ground into a very fine powder that is sifted several times through a cotton mesh and finally it is extracted into a juice.

ACTIVE INGREDIENTS AND EFFECTS

Sananga is said to contain an abundance of alkaloids. It has been suggested that Sananga includes the potent active ingredient, ibogaine, but this claim has not yet been confirmed. In addition to ibogaine, it is believed that several other alkaloids, such as coronaridine, quebrachidine, heneanine, 3-hydroxycoronaridin, ibogamine and voacangin also contained in Sananga. All of these alkaloids have powerful psychoactive effects and can also have powerful antibiotic effects.

There may be slight differences in the composition of Sananga: the Becchete of the Matsés tribe contain roots of *Tabernaemontana undulata*, while the Sananga eye drops of the Kaxinawá tribe contain roots of Kunakip (*Tabernaemontana sananho*). It is known that these two roots produce a strong vision (waimatai) very useful for a successful hunt.

DOSE

A single drop per eye is enough for a powerful Sananga session. We recommend that you find a quiet and tranquil place, either in nature or at home in a peaceful setting and with meditative music.

Acute effects will go away after 10 to 15 minutes, but subtle side effects can last for several days. Be sure to lie down to allow for proper application and keep your eyes closed during the session.

It is important to apply a drop on both eyes and not wait with the second, apply it immediately to balance the energies of both eyes. Then briefly blink eyelids to distribute the fluid all over the eye. Ideally, you will find a second person who can apply Sananga for you.

Shortly after applying to the eyes, most users report an intense burning sensation. Yet these effects occur after a few minutes and can be alleviated by focusing on your breathing and visualizing how pain removes your blocked energies and brings deep healing.

In addition, you may also experience vomiting, which are additional indications for the elimination of blocked energies and disease. Try to relax as much as possible.

PRECAUTIONS

Contact lenses should be removed before applying Sananga.
